

HOOK AND LOOP SURFACE

Suitable for use with hook and loop mopping systems. It is best used with the Sabco Professional 40cm Micro FX Hook Pad, which can be attached to the Sabco Professional 40cm Long Reach Hook & Loop Rail Base.

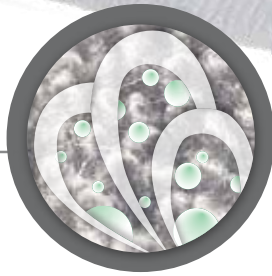

UltraClean Microfibre Disposable Flat Mop Pads

100% MICROFIBRE

UltraClean Microfibre Disposable Flat Mop Pads are safe to use on even the most delicate surfaces.

The microfibre disposable pad will glide over the floor surface removing microbes, dirt, dust & grime.

BLEACH RESISTANT YARN

Suitable for use with just water or chemicals like bleach.

STITCHING

Stitched around all sides to help the pad hold it's shape and reduce linting.

ULTRACLEAN MICROFIBRE DISPOSABLE FLAT MOP PADS - 25PK

PAD DIMENSIONS 46 X 14CM

CODE	EAN	PACK DIMENSIONS	CARTON QTY	CARTON DIMENSIONS	INNER TUN

- Single use microfibre pads that are ideal for high risk areas such as aged care, healthcare, bsc & food environments.
- Up to 20m² coverage from each pad.
- Suitable for dry or damp mopping.
- Reduces the need for heavy buckets of water.

- Suitable for use with just water or with chemicals.
- Bleach safe.
- Lint free.
- Suitable for use with hook and loop mopping systems.

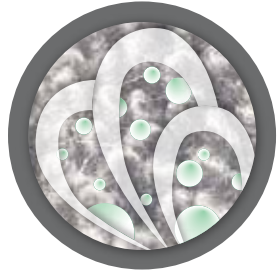

COLOUR CODING

Sabco Professional offer an extensive colour coded range of products to ensure the right product is used to clean the right area, minimising the risk of cross contamination.

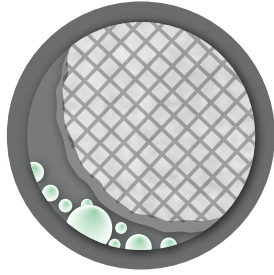

Commercial Cleaning Solutions

MICROFIBRE

Microfibre will trap microbes, dirt, dust, grime and moisture within, lifting them away from the surface for a superior clean. Result: surface is hygienically clean, dry and polished.

COTTON FIBRE

Cotton fibres push dirt particles across the surface, rather than lifting them away. Result: surface is still dirty and wet.

The Benefits Of Using Disposable Microfibre Mops

CLEANING BENEFITS AND POINTS TO CONSIDER

There are a lot of considerations to keep in mind when selecting the best mop for your facility. Choosing the right mop for each area of the building and cleaning functions can be challenging.

Both disposable and re-usable microfibre mops can help you achieve cleaner floors in your facility. To choose the best mop for your facility, you need to consider what is most important to your business. It is likely that your facility will benefit from a mix of disposable and re-usable microfibre mops.

Facilities who are not concerned about HAIs (Healthcare associated infections), may place more importance on re-usable mops which are cheaper when washed correctly and can be used on more aggressive floor surfaces. It is important you consider the potential increase in productivity and reduced labour costs that can be associated with using disposable mops.

Cleaning staff can simply dispose of the mop pad after cleaning, versus having to collect soiled pads and take them to the proper location to be laundered (a process that can be cumbersome and time consuming).

Disposable microfibre mops can increase your worker's productivity and reduce labour costs.

WHAT IS MICROFIBRE?

Microfibre is processed mechanically and chemically to be broken in finer parts, 1/100th the diameter of a human hair. What defines a microfibre is its size: a microfibre must be smaller than one denier, which is a unit of linear measurement equal to the mass in grams of 9,000 meters of the fibre.

ADDITIONAL BENEFITS

Disposable mops will cost you less on initial purchase but are also a one-time use product. Energy, chemicals, water, and labour used during the laundering process for reusable are not a factor with disposable mops. When considering disposable mops, the costs associated with disposal of mops is lower than the costs associated with laundering a re-usable mop.

Because they are a one-time use product, each new mop provides consistent cleaning power. If you are cleaning a large area, make sure you know the maximum recommended square footage that your disposable mop is effective in cleaning before replacing it.
